## **Final volume of the Collaborative Research Center Transregio 63 InPROMPT**

20.07.2022 - The goal of the Collaborative Research Center Transregio 63 InPROMPT was to develop green, chemical production processes in which renewable raw materials will permanently replace petroleum and natural gas in the manufacture of many chemical products.

The project was funded by the German Research Foundation from 2010 to 2022 with a total of 27 million euros and features close interplay of experiment, modeling and optimization, a variability of homogeneously catalyzed reactions, and a general methodology for rapid model-based process development.

At the end of the Collaborative Research Center, a book summarizing all research results was published.
